# 2. THE EMAIL SORTER SCRIPT

Filter and label emails based on keywords or sender.

**BEFORE**

```
1: import python
2:
3: def main():
4:     email = python("Newsletters")
5:     email = python()
6:     labels = {
7:         'Newsletters': 'newsletters',
8:     }
9: }
```

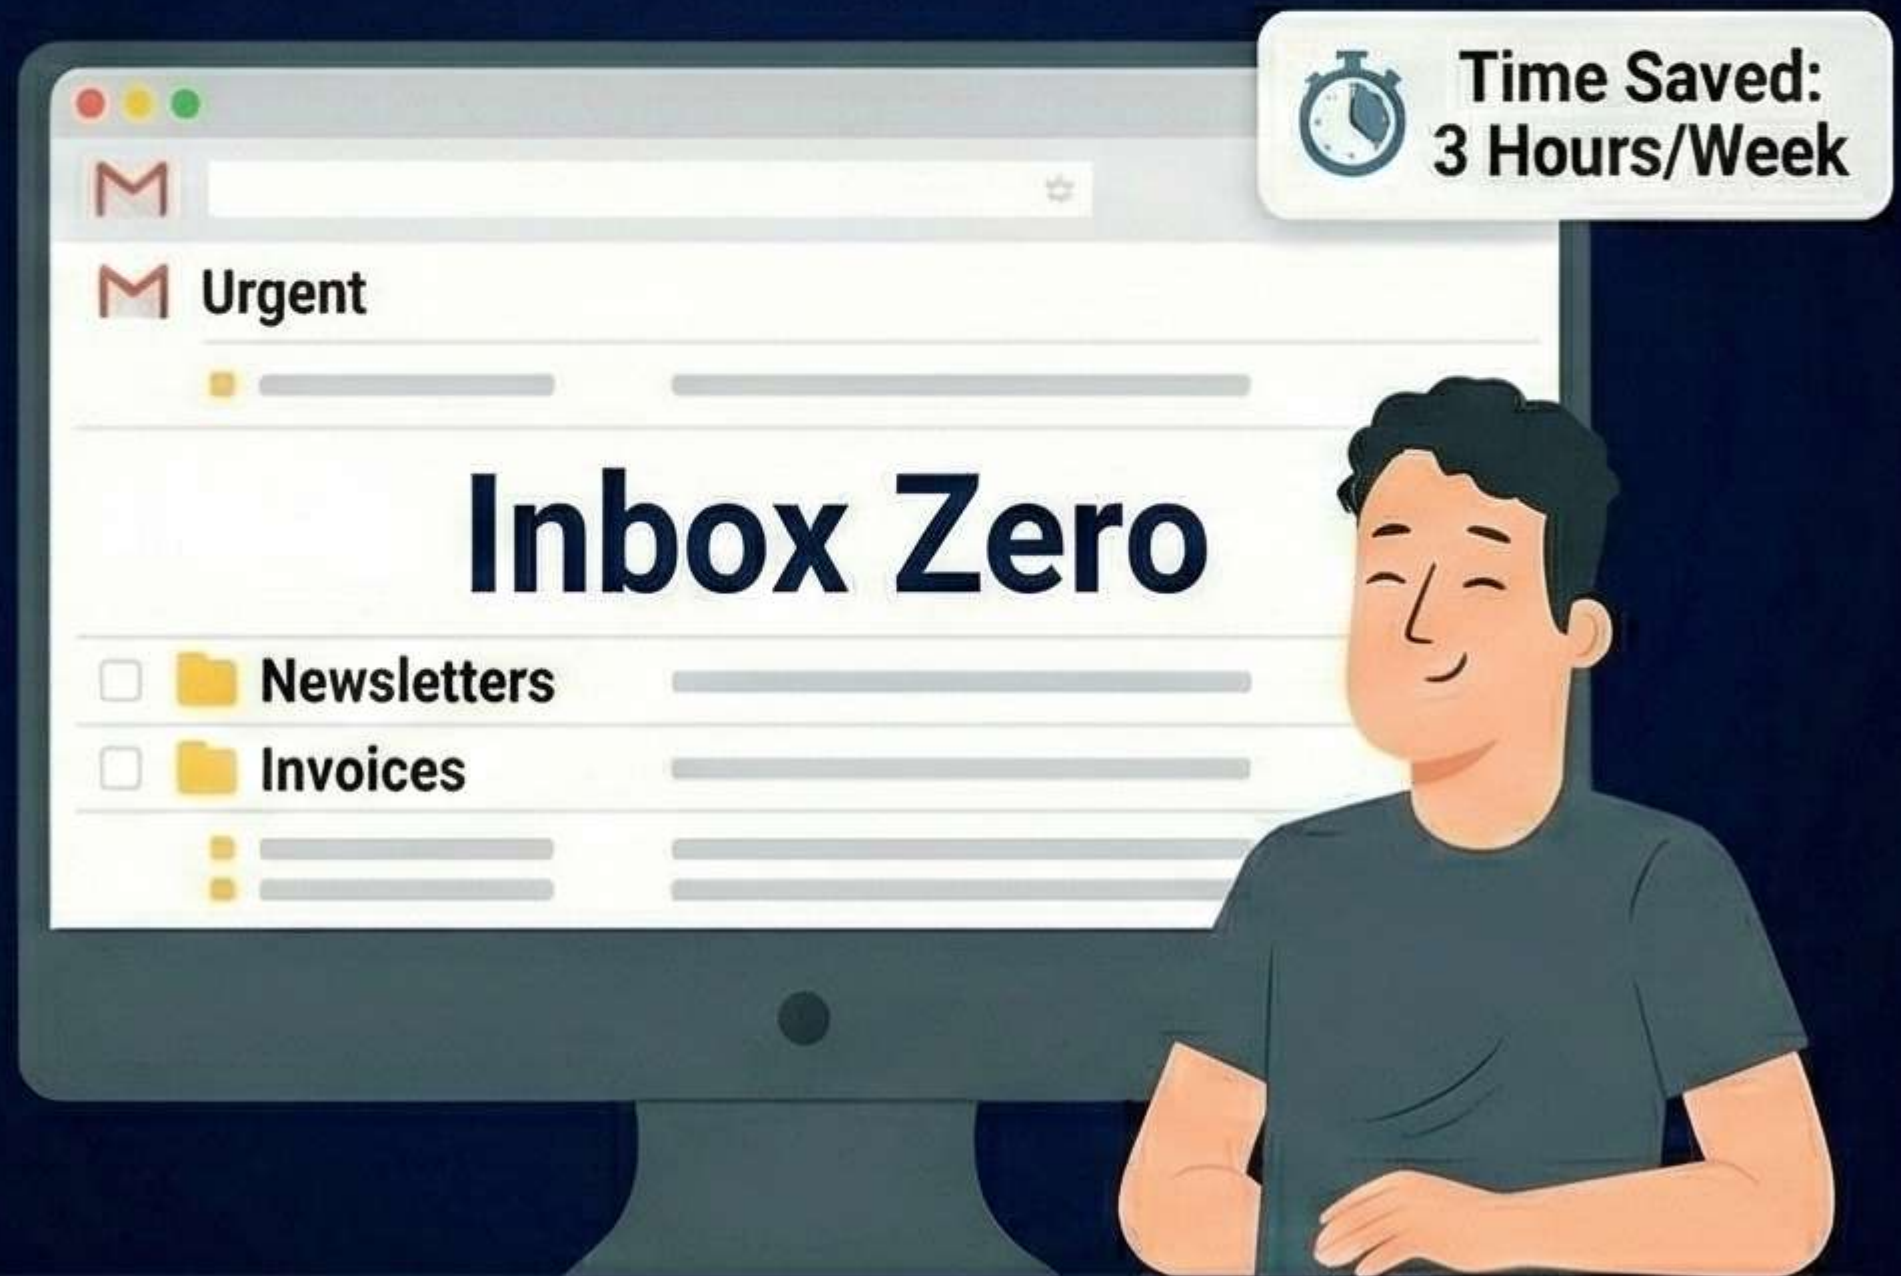

**AFTER**

# THE RESULT: INBOX ZERO, AUTOMATICALLY

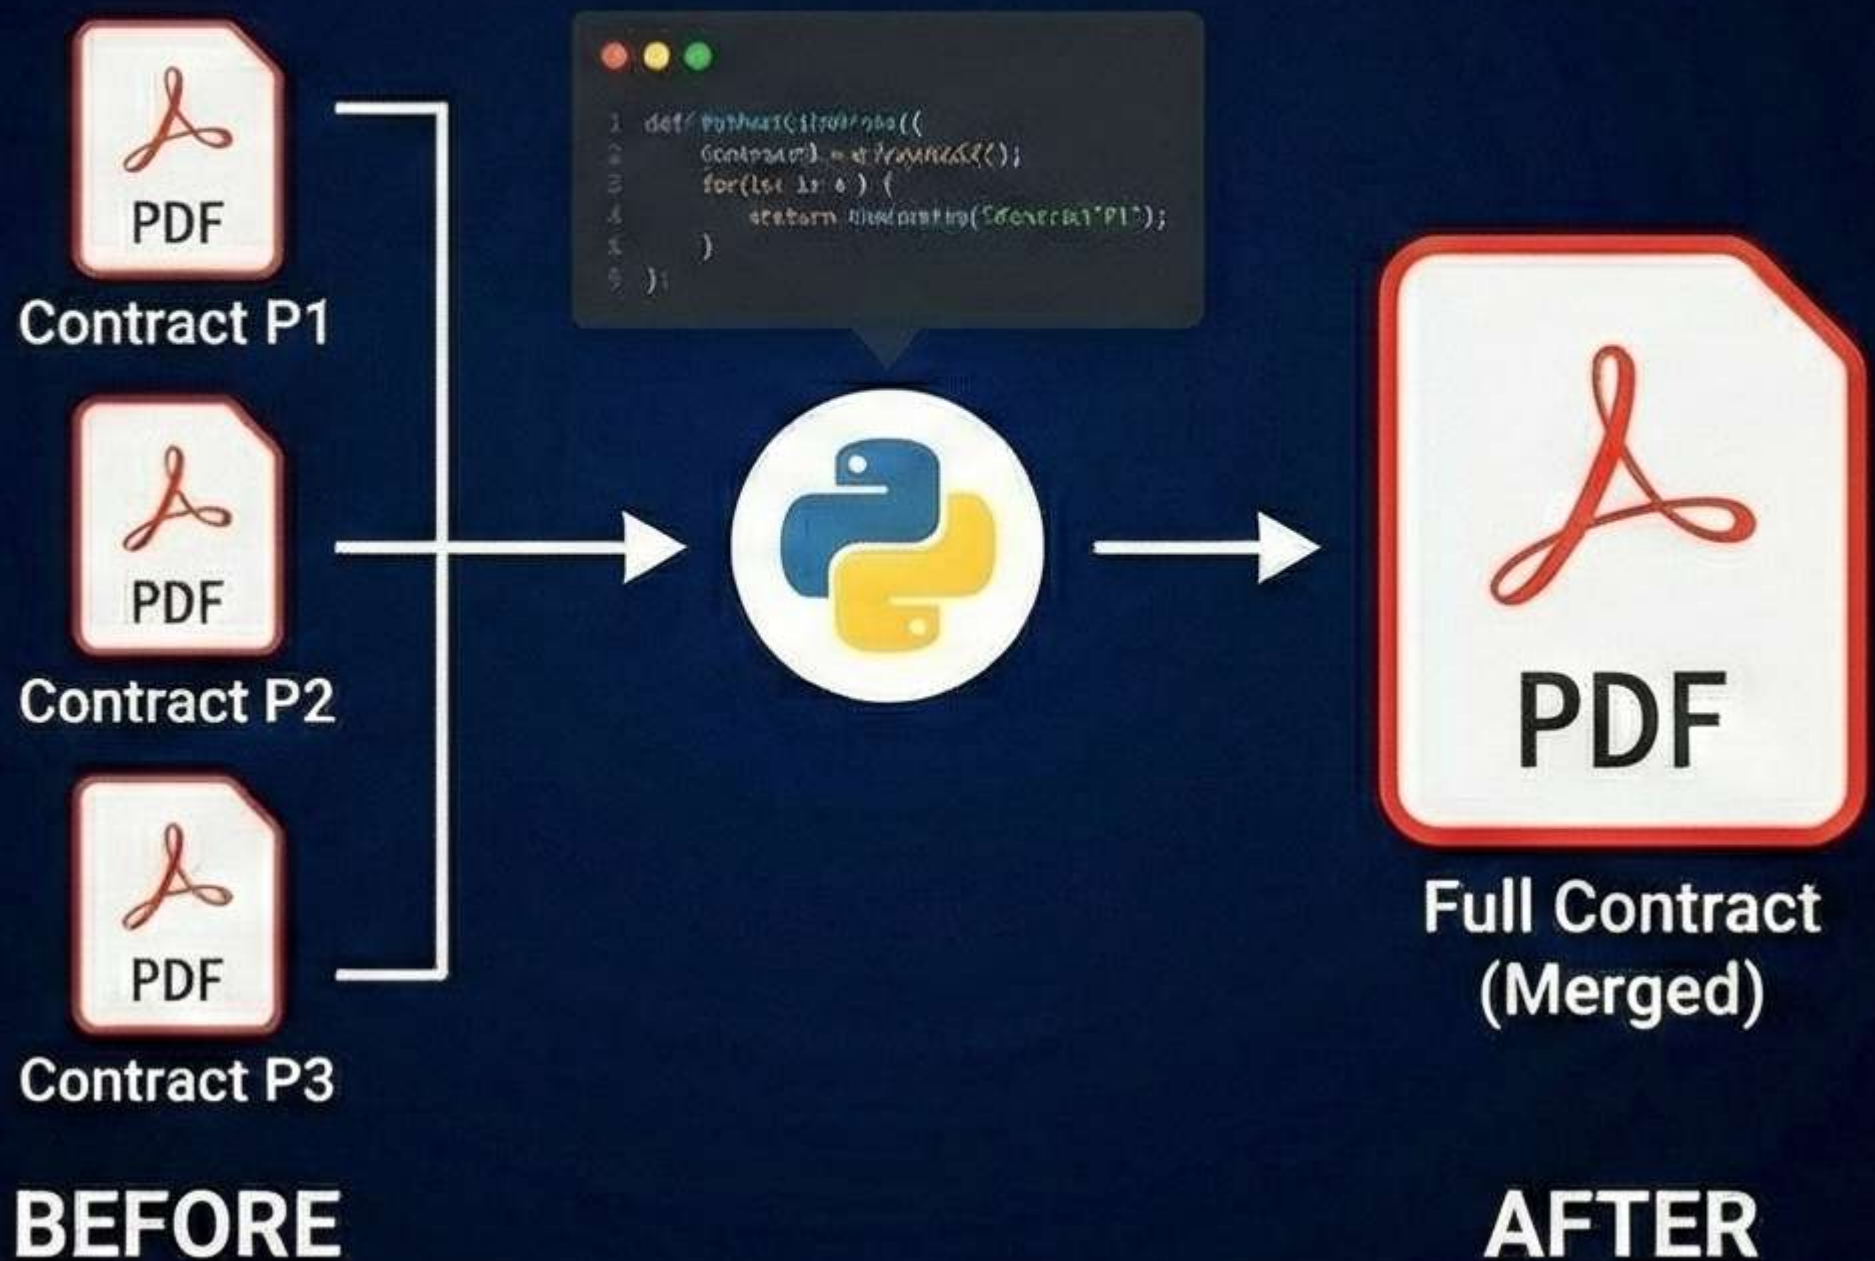

Focus on what matters. Let the script handle the noise.

# 3. THE PDF MERGER SCRIPT

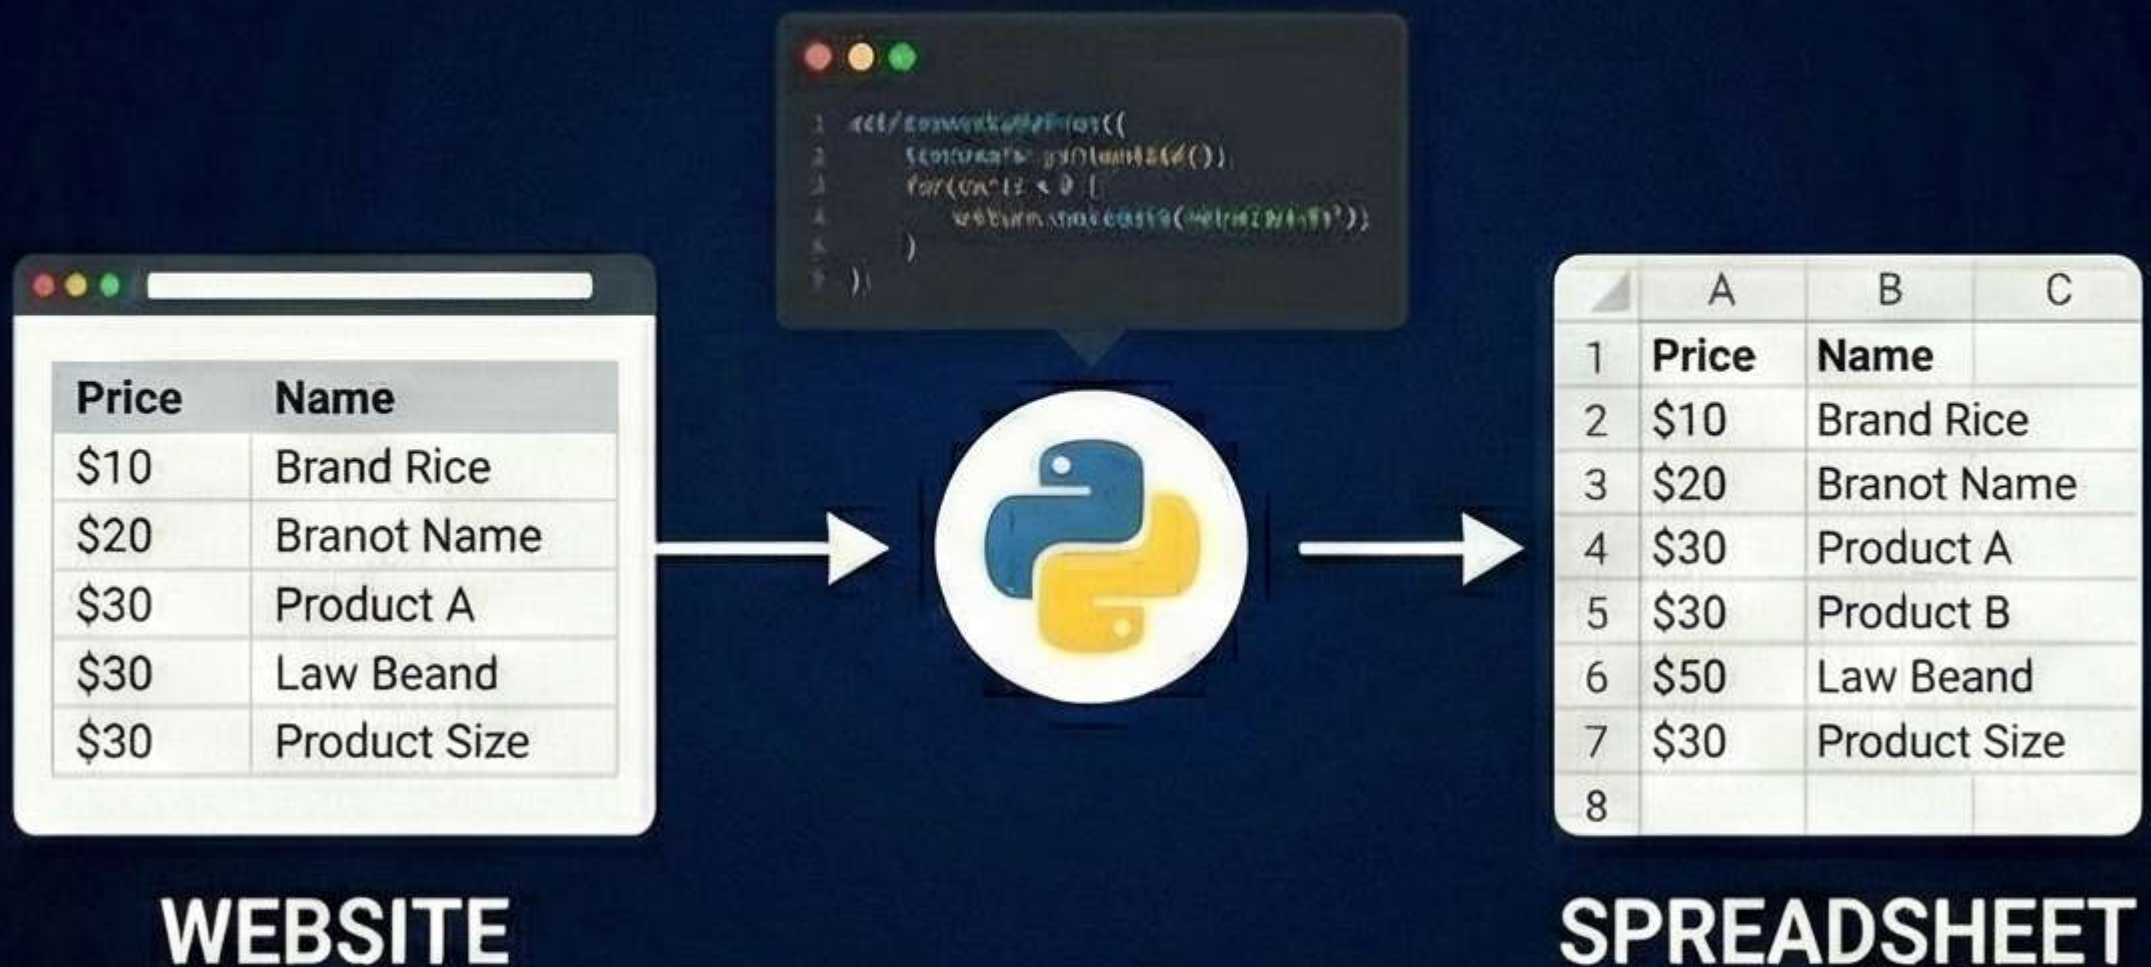

Combine multiple PDF files into a single document.

# 4. THE WEB DATA EXTRACTOR SCRIPT

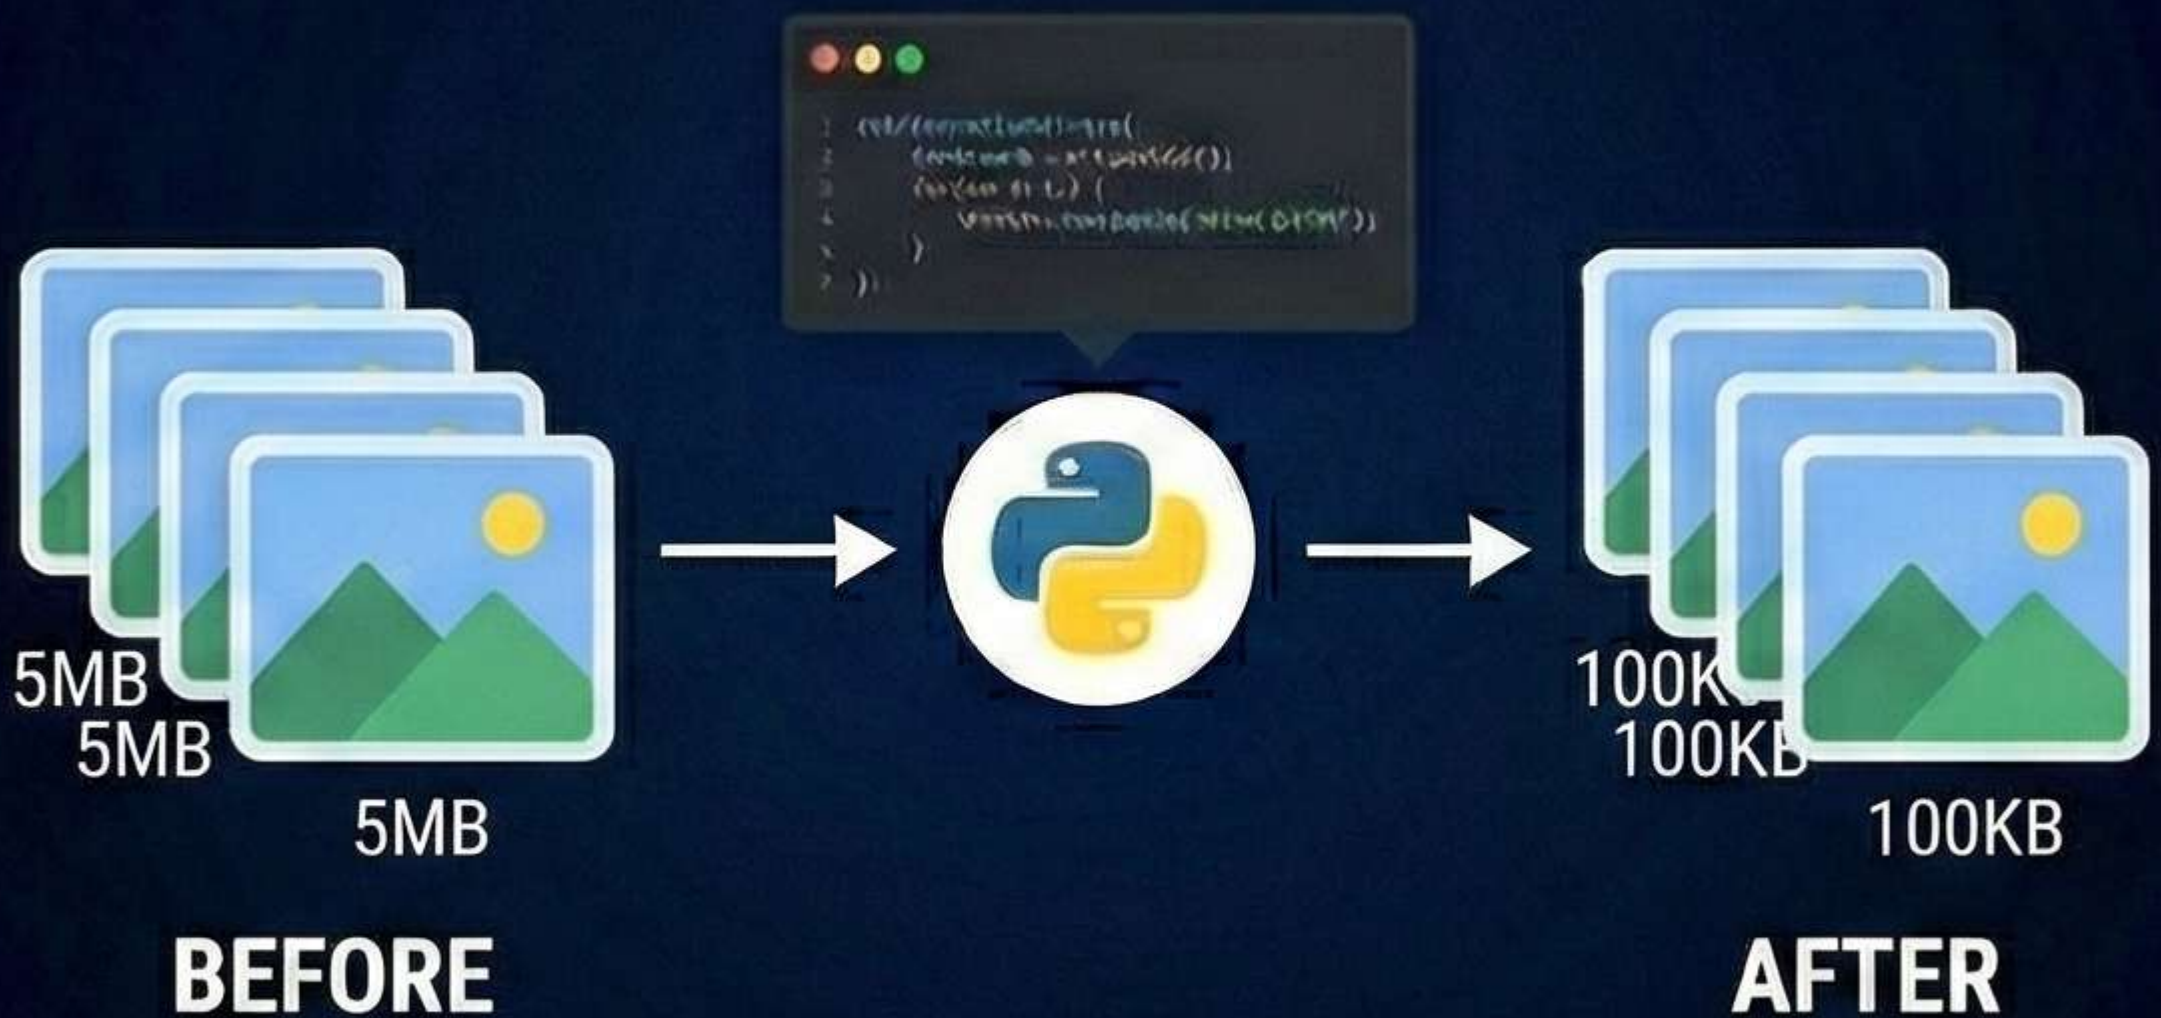

Automatically scrape data from websites into a spreadsheet.

# 5. THE BULK IMAGE RESIZER SCRIPT

Resize and optimize hundreds of images in seconds.

# 5. THE BULK IMAGE RESIZER SCRIPT

Resize and optimize hundreds of images in seconds.
